

Why is Linux Professional Institute the global standard in open source skills certification?

Linux Professional Institute (LPI) is a non-profit organization whose mission is to increase the use of open source by supporting the people who work with it. For more than 20 years we and our partners have helped more than 200,000 certified professionals in more than 180 countries boost their careers. Our programs are trusted to prove what you know.

We're neutral

LPI certificate and certification programs are Linux distribution-neutral. We support multiple ways to prepare for our exams and do not earn any revenue from training. We are also politically neutral.

We're relevant

LPI exams are developed to high quality standards using psychometric techniques and a global team of open source experts. Programs are updated as needed, to track changes in the software and job requirements. LPI Membership enables certified professionals to guide for future direction.

We're accessible

LPI exam programs are available worldwide in multiple languages (with more in development). Country-indexed pricing keeps exams as affordable as possible. A network community of members, supporters and hundreds of partners keeps us aware of what is needed both locally and globally.
